END OF LIFE

The product end of life factors are taken into account during the design phase. Dismantling and sorting of components or materials is made as easy as possible with a view to recycling or failing that, another form of reuse. This product falls within the scope of the WEEE directive (2012/19/EU). Therefore it must be processed through local WEEE recycling/recovery channels.

• **Extended producer responsibility:**

The sale of this product is subject to a contribution to eco-organisations in each country responsible for managing end of life products in the field of application of the European Waste Electronic and Electrical Equipment Directive.

• **Recyclability rate:**

Calculated using the method described in technical report IEC/TR 62635, the recyclability rate of the product is estimated at 91 %. This value is based on data collected from a technological channel operating on an industrial basis. It does not pre-validate the effective use of this channel for the end of life of this product.

Separated into:

- plastic materials (excluding packaging) : 37 %
- metal materials (excluding packaging) : 17 %
- packaging (all types of materials) : 37 %

ENVIRONMENTAL IMPACTS

The evaluation of environmental impacts examines the stages of the Reference Product life cycle: manufacturing, distribution, installation, use and end of life. It is representative of products marketed and used in Europe.

For each phase, the following modelling elements were taken in account:

Manufacture	Materials and components of the product, all transport for the manufacturing, the packaging and the waste generated by the manufacturing.
Distribution	Transport between the last Group distribution centre and an average delivery point in the sales area.
Installation	The end of life of the packaging.
Use	<ul style="list-style-type: none"> • Product category: PSR-0005-ed2-EN-2016 03 29 - § 3.8.1.1 - Power socket and electronic connection socket • Use scenario: non-continuous operation for 20 years at 50% of rated load, during 50% of the time. This modelling duration does not constitute a minimum durability requirement. • Energy model: Electricity Mix; Europe 27 - 2008.
End of life	The default end of life scenario maximizing the environmental impacts.
Software and database used	EIME & database CODDE-2018-11

The values of the 27 impacts defined in the PCR-ed3-EN-2015 04 02 are available in the digital database of pep-ecopassport.org website.

The environmental impacts are calculated for a configuration composed by socket-outlet, with cover and plate (Reference Product).

For color configurations different from that of the Reference Product, take the same value as the Reference Product for each environmental impact at each phase of the lifecycle.

For a configuration including a socket-outlet with shutters the environmental impacts of each phase of the lifecycle are obtained by adopting the following coefficients on those of the Reference Product.

	Total LCA	Manufacturing	Distribution	Installation	Use	End of life
Global warming	0,9	1,1				
Ozon depletion	1,0	1,0				
Acidification of soil and water	0,9	1,0				
Water eutrophication	1,0	1,0				
Photochemical ozone creation	0,9	1,1				
Depletion of abiotic resources - elements	1,4	1,4	1,0	1,0	0,9	1,0
Total use of primary energy during the life cycle	0,9	1,1				
Net use of fresh water	0,9	1,1				
Depletion of abiotic resources - fossil fuels	0,9	1,1				
Water pollution	1,0	1,0				
Air pollution	1,0	1,2				

Moreover, for the multi-gang configurations, the described environmental impacts of the socket-outlet with shutters have to be multiplied by the number of installed products.
